

PERFORMANCE

A Symphony of Power

At the core of the Superleggera Veloce12 lies the 5.5-litre V12 engine, delivering a formidable 478hp and 419lb ft of torque. This symphonic, naturally aspirated engine, enhanced by an optimized cooling system and a freer-flowing exhaust system, produces 25hp more than its original specification. Each donor engine undergoes rigorous endoscopic and physical inspections before being meticulously disassembled and rebuilt to as-new condition.

The Superleggera Veloce12 also benefits from a new carbon fiber intake, further enhancing its power and efficiency. This powerhouse enables the Veloce12 to accelerate to 62mph (100km/h) in just 4.4 seconds, with a top speed of 199mph (320km/h). The six-speed manual gearbox puts you in command, allowing you to savor each and every rev, and fully experience the raw, unbridled power of this exceptional engine.

Driving the Superleggera Veloce12 is an immersive experience, where every element is designed to amplify the thrill of the journey. The attention to detail ensure that the Veloce12 is not just a car, but a showcase of design competence and automotive artistry. This blend of heritage, innovation, and sheer driving pleasure makes the Veloce12 a true testament to Touring Superleggera's commitment to excellence.
